

# Ready2Meet Android Application

Spring 2018

Berkay KÖKSAL

# Idea

- Facilitate creating events and inviting people
- Provide tool for organizing the people joining the event
- Interact with users based on location
- Receive notifications on possible activities nearby

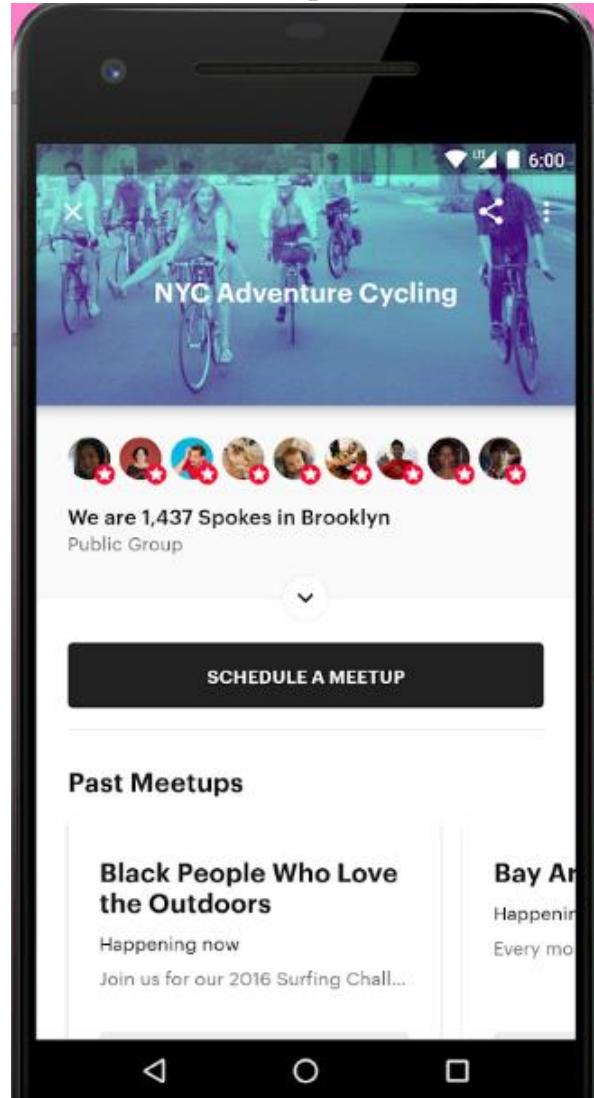

# Business Model

- Target users: Everyone
- Development platform: only for Android (SDK 17+)
- Marketing strategy:
  - Offer free events
  - Discounts for events
  - Gain as many users as possible

# Monetization

- Completely free to use
- Possible joint event ticket sales with organisers
- Advertisement inside the application (not the best option)
- In-App sales:
  - Remove Ads
  - Premium Subscription (extra features)

# Competitors

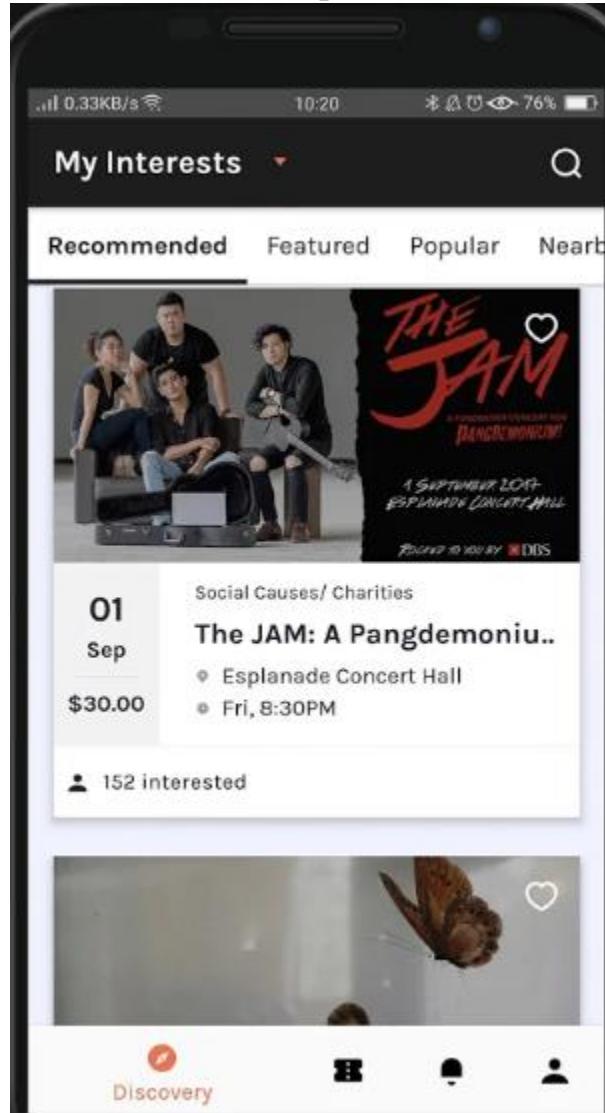

- MeetUp

Great suggestion system  
Notification system is very good

But, it is group based not event based.  
Individual users can't create meetups  
No direct interaction between users

# Competitors

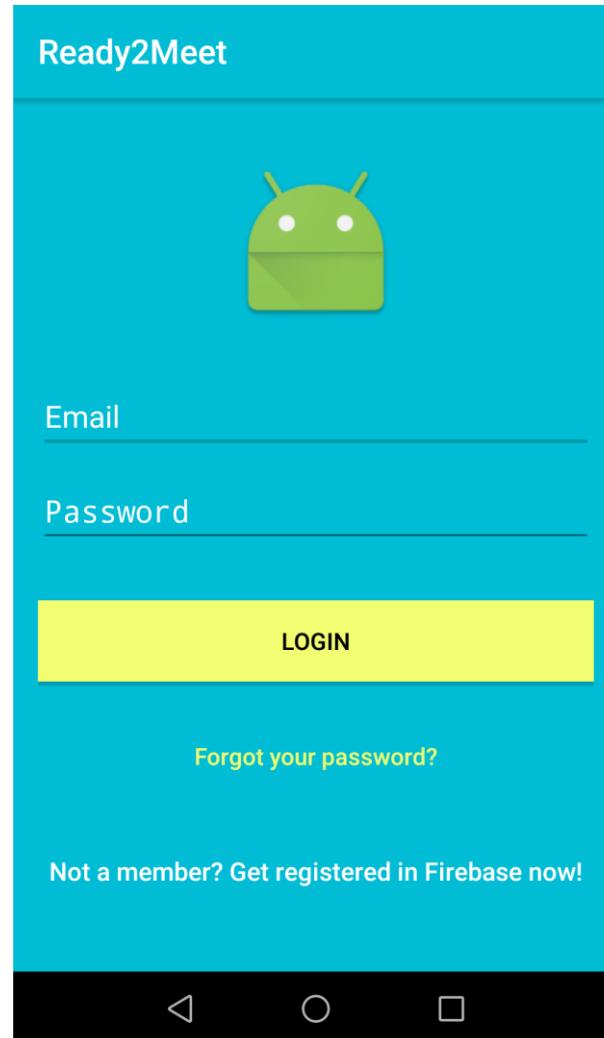

- BeScene

Great in app ticket sale system  
Interconnected comments with Facebook

But, UI is not easy to use and again normal users can't create events.

# Firebase Cloud Functions

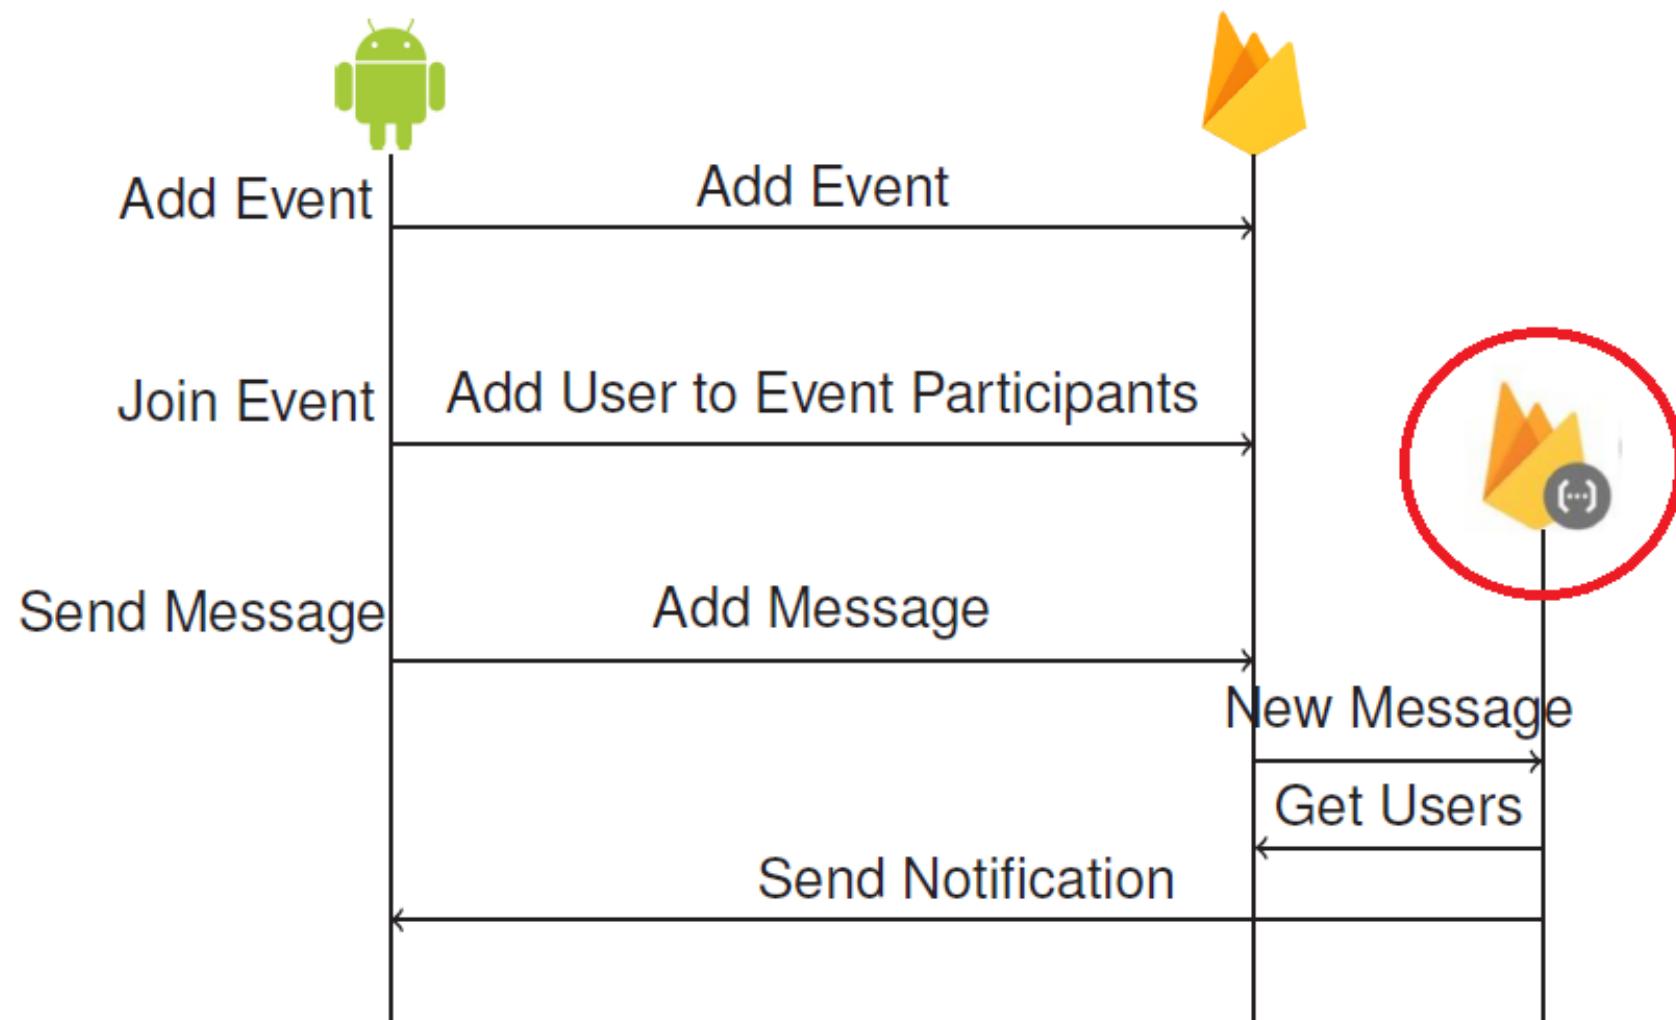

The screenshot shows the Google Cloud Platform Cloud Functions interface. At the top, it says "Google Cloud Platform" and "Ready2Meet". Below that, it shows "Cloud Functions" and "Function details" for "sendMessageNotification". It indicates "Memory allocated: 256 MB". Under "Trigger", there is a dropdown menu. In "Source code", the "Inline editor" is selected. Below that, there are tabs for ".DS\_Store", ".runtimeconfig.json", "index.js", "package-lock.json", and "package.json". The "index.js" tab is active, displaying the following code:

```
1 'use strict';
2
3 const functions = require('firebase-functions');
4 const admin = require('firebase-admin');
5 admin.initializeApp(functions.config().firebase);
6
7 /**
8 * Triggers when a new message is sent to an event chat and send
9 * a notification
10 * Messages add a flag to `/Messages/{eventId}`.
11 * Users save their device notification tokens to `/Messages/{event
12 */
13 exports.sendMessageNotification = functions.database.ref('/Messa
14   const eventId = event.params.eventId;
15   const messageId = event.params.messageId;
16   var message;
17   admin.database().ref('/Messages/${eventId}/${messageId}/messag
18   function(snapshot) {
19     message = snapshot.val();
20     console.log(`We have a new message for event: ${eventId}, ${mess
21   }, function(errorObject) {
22     console.log(`Reading the message failed: ${errorObject.message}`);
23   });
24   var eventTitle;
25   admin.database().ref('/Events/${eventId}/title').on("value",
```

At the bottom, there is a "Function to execute" dropdown set to "sendMessageNotification" and a "More" link at the very bottom.

- Cloud functions are used to set database triggers that listen changes on database, and take action to some certain changes.
- These actions can be fired by the server and captured by devices to perform operations.

# AdWords Campaign

# Google Play Store Presence

Disclaimer: The application is still in the development phase. More features and bug fixing will be done in the future to make it better. Please give us feedback and ask for features you would like to see in the application.

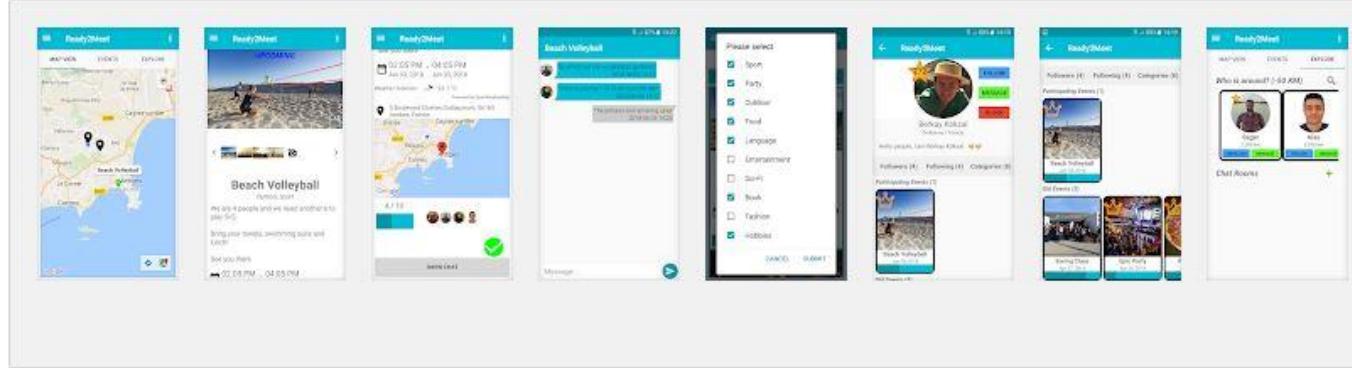

Ready2Meet offers a free platform for people to socialise with others! Important features are designed for you to create your own event and interact with people around you to participate together.

- Create or join an event in one of the categories (Sport, Party, Career, Study, etc.)
- Talk with people who are participating
- Share photos from the event to have a shared gallery for everyone
- See what events are around you
- See people and events around you
- Follow people and see their interests

The screenshot shows the Google Play Store listing for the 'Ready2Meet' app. At the top, the app icon, title, developer name 'fr.eurecom.Ready2Meet', and a 1-star rating are visible. To the right, the release date 'Jun 2, 2018' and the word 'Published' are shown. Below this, a large notification box displays a play button icon and the text: 'Your update is live' at 15:26. It continues: 'Your update to Ready2Meet, created on Jun 2, 2018, 3:02 PM, is live in the store.' At the bottom of the notification, an email address 'berkay.koksal.dev@gmail.com' is listed.

 Ready2Meet  
Berkay Köksal

Hello,

Berkay Köksal has invited you to a testing program for an unreleased version of the Ready2Meet app. As a tester, you'll receive an update that includes a testing version of the Ready2Meet app, which may also include unreleased versions of its instant app.

Note that testing versions may be unstable.
